Number:9	<a href="#">Mega</a>	Mega Secure Cloud Storage	
Number:10	<a href="#">Wikipedia</a>	Wikipedia	

### EXPLANATION:

Some tags used in the table were title tag which gives us the title or tells us the title of the page and then body tag defines the main content of the HTML document or the section of the HTML document that will be directly visible on web page. In body h1 was used for headings and also style tag was used to add style to the element such as font and colour etc. the border tag was used to set the visible border width to most HTML elements h2 was used for subheadings of different sizes subheadings can be from h1 to h6 h6 being the smallest one. Also the br tag was used to break paragraphs now in table codes used were tr for table rows and td for table columns and th defines the header cell in table while table defines the table. The href attribute specifies the URL of the page the link goes to if the href attribute is not present, the a tag will not be a hyperlink its syntax a href="URL" target="\_blank" The target attribute specifies where to open the linked document. The img tag is used to embed an image in an HTML page. While the src tag specifies the path to the image. Height and width tags were used to adjust the size of image

### EXPLANATION:

Some tags used in the table were <title> tag which gives us the title or tells us the title of the page and then <body> tag defines the main content of the HTML document or the section of the HTML document that will be directly visible on web page. In body <h1> was used for headings and also <style> tag was used to add style to the element such as font and colour etc. the border tag was used to set the visible border width to most HTML elements <h2> was used for subheadings of different sizes subheadings can be from <h1> to <h6> h6 being the smallest one. Also the <br> tag was used to break paragraphs now in table codes used were <tr> for table rows and <td> for table columns and <th> defines the header cell in table while <table>

defines the table. The href attribute specifies the URL of the page the link goes to if the href attribute is not present, the <a> tag will not be a hyperlink its syntax <a href="URL">.

"target="\_blank" The target attribute specifies where to open the linked document. The <img> tag is used to embed an image in an HTML page. While the src tag specifies the path to the image. Height and width tags were used to adjust the size of image.
